FIG. 8

Figure 1 consists of 12 sub-graphs, labeled (a) through (l), each showing the time course of a different physiological or behavioral parameter over a 12-hour period. The x-axis for all graphs represents time in hours, ranging from 0 to 12. The y-axis represents the value of the parameter, with scales varying between graphs. The parameters and their approximate trends are as follows:

- (a) Rectal temperature: Shows a slight increase from approximately 36.5°C to 37.5°C.
- (b) Core temperature: Shows a slight increase from approximately 36.5°C to 37.5°C.
- (c) Heart rate: Shows a significant increase from approximately 60 bpm to 120 bpm.
- (d) Blood pressure: Shows a slight increase from approximately 100 mmHg to 120 mmHg.
- (e) Blood glucose: Shows a slight increase from approximately 100 mg/dL to 120 mg/dL.
- (f) Blood lactate: Shows a significant increase from approximately 1 mmol/L to 10 mmol/L.
- (g) Blood pH: Shows a slight decrease from approximately 7.4 to 7.35.
- (h) Blood bicarbonate: Shows a slight decrease from approximately 24 mmol/L to 22 mmol/L.
- (i) Blood oxygen saturation: Shows a slight decrease from approximately 98% to 95%.
- (j) Blood hemoglobin: Shows a slight decrease from approximately 15 g/dL to 14 g/dL.
- (k) Blood hematocrit: Shows a slight decrease from approximately 45% to 42%.
- (l) Blood hemoglobin concentration: Shows a slight decrease from approximately 15 g/dL to 14 g/dL.
